

Organic and biodynamic products

This Australian Standard® was prepared by Committee FT-032, Organic and Biodynamic Products. It was approved on behalf of the Council of Standards Australia on 26 October 2015.

This Standard was published on 19 November 2015.

The following are represented on Committee FT-032:

- Accord Australasia
 - Australian Food and Grocery Council
 - Australian National Retailers Association
 - Australian Organic
 - Biodynamic Agriculture Australia
 - Consumer's Federation of Australia
 - Department of Agriculture (Australian Government)
 - Joint Accreditation System of Australia and New Zealand
 - National Association for Sustainable Agriculture Australia
 - Organic Federation of Australia
 - Organic Industry Standards and Certification Council
-

This Standard was issued in draft form for comment as DR AS 6000:2015.

Standards Australia wishes to acknowledge the participation of the expert individuals that contributed to the development of this Standard through their representation on the Committee and through the public comment period.

Keeping Standards up-to-date

Australian Standards® are living documents that reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued.

Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments that may have been published since the Standard was published.

Detailed information about Australian Standards, drafts, amendments and new projects can be found by visiting www.standards.org.au

Standards Australia welcomes suggestions for improvements, and encourages readers to notify us immediately of any apparent inaccuracies or ambiguities. Contact us via email at mail@standards.org.au, or write to Standards Australia, GPO Box 476, Sydney, NSW 2001.

PREFACE

This Standard was prepared by the Standards Australia Committee FT-032, Organic and Biodynamic Products, to supersede AS 6000—2009.

The objective of this Standard is—

- (a) to establish a framework for the organic industry covering production, preparation, transportation, labelling and marketing;
- (b) to ensure that all stages of production, preparation and marketing meet the minimum requirements as outlined in this Standard;
- (c) to protect consumers against deception and fraud in the market place and unsubstantiated product claims;
- (d) to protect producers of organic products against misinterpretation of other agricultural products as organic;
- (e) to provide a guide to farmers contemplating conversion to organic farming;
- (f) to raise awareness of ecological requirements in nature and the farm environment; and
- (g) to harmonize national provisions for the production, identification and labelling of organically and biodynamically grown products.

The objective of this revision is to update—

- (i) Clauses 2.1 Farm, and 2.2 Conversion of land;
- (ii) Clause 2.14.2.9 on the sunset condition for synthetic amino acids;
- (iii) Clause 2.17 Livestock housing and range management;
- (iv) Clause 2.22 Biodynamic production; and
- (v) Appendix G (new) provides additional guidance on biodynamic production.

This Standard stipulates minimum requirements for products placed on the market with labelling that states or implies they have been produced under organic or biodynamic systems. In this Standard the production procedures are an intrinsic part of the identification and labelling of, and claims for, such products.

Appendix A provides a brief outline of a certification system for information.

The procedures for certification are set out in MP 100, *Procedures for certification of organic and biodynamic products*.

The main text of this Standard contains two distinct components:

- (A) *General principles* The first component identifies general principles that apply to organic and biodynamic activities. These are in *italic text*. General principles are intended to give the reader information and guidance on what each clause aims to achieve.
- (B) *Requirements* The second component stipulates the specific conditions (or requirements), which must be met by an operator of an organic or biodynamic unit for compliance with this Standard. These are in normal print.

Requirements outlined in this Standard are complementary and additional to other health, agricultural or food standards or regulatory requirements recognized by or enacted by the Commonwealth, States or Territories. These include but are not limited to food safety, animal welfare, environmental management and social justice.

This Standard applies in addition to Commonwealth, state/territory or local statutory laws.

Statements expressed in mandatory terms in footnotes to tables are deemed to be requirements of this Standard.

This Standard is based on the publication by Organic Industry Export Consultative Committee (OIECC), c/o Australian Quarantine and Inspection Service (AQIS) of Commonwealth Department of Agriculture Fisheries and Forestry, *National Standard for Organic and Bio-Dynamic Produce*, Edition 3.3, 1 July 2007.

The terms 'normative' and 'informative' have been used in this Standard to define the application of the appendix to which they apply. A 'normative' appendix is an integral part of a Standard, whereas an 'informative' appendix is only for information and guidance.

FOREWORD

The Organic Industry Export Consultative Committee (OIECC) publication, *National Standard for Organic and Bio-Dynamic Produce*, was first implemented in 1992 as the Australian Export Standard for products labelled as 'organic' or 'biodynamic'. A second edition was released in 1998, with further development resulting in a third edition in 2002. Since inception it has provided the organic industry with a nationally agreed Standard.

Organic farming systems include those that are referred to as 'biodynamic' or 'biological'. The basic principles are to achieve optimum quantities of products and food of high quality without the use of artificial fertilizers or synthetic chemicals. Organic farming requires the nurturing and maintaining of land for future generations.

Emphasis is placed on management practices, the use of renewable resources, the need for conservation of energy, soil and water resources and the maintenance of environmental quality. The production cycle is as closed as possible, with limited use of external inputs permitted by this Standard. The objective of this system is to be sustainable.

A Standard for organically produced agricultural products differs from Standards for other agricultural products in that the production procedures are an intrinsic part of the identification and labelling of, and claims for, such products.

The principal objectives of an organic production system include—

- (a) the production of quality food and fibre;
- (b) the enhancement of biological cycles in farming systems;
- (c) maintaining or improving fertility of soils;
- (d) working as far as practicable within a closed system by minimizing the use of non-renewable resources;
- (e) the avoidance of land, water and atmospheric pollution resulting from agriculture and processing practices; and
- (f) the co-existence with, and the protection of, the environment and the welfare of animals.
