Australian Standard®

Fixed fire protection installations—
Pumpset systems
This Australian Standard® was prepared by Committee FP-008, Fire Service Pumps. It was approved on behalf of the Council of Standards Australia on 11 October 2013. This Standard was published on 18 November 2013.

The following are represented on Committee FP-008:

- Association of Hydraulic Services Consultants Australia
- Australasian Fire and Emergency Service Authorities Council
- Australian Chamber of Commerce and Industry
- Fire Protection Association Australia
- Insurance Council of Australia
- Pump Industry Australia

This Standard was issued in draft form for comment as DR AS 2941.

Standards Australia wishes to acknowledge the participation of the expert individuals that contributed to the development of this Standard through their representation on the Committee and through the public comment period.

Keeping Standards up-to-date

Australian Standards® are living documents that reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued.

Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments that may have been published since the Standard was published.

Detailed information about Australian Standards, drafts, amendments and new projects can be found by visiting www.standards.org.au

Standards Australia welcomes suggestions for improvements, and encourages readers to notify us immediately of any apparent inaccuracies or ambiguities. Contact us via email at mail@standards.org.au, or write to Standards Australia, GPO Box 476, Sydney, NSW 2001.
PREFACE

This Standard was prepared by the Standards Australia Committee FP-008, Fire Service Pumps, to supersede AS 2941—2008.

Maintenance requirements for fire pumpsets are given in AS 1851, *Routine service of fire protection systems and equipment*.

The symbols used in this Standard comply with those given in HB 20, *Graphical symbols for fire protection drawings*, and have been developed from ISO Standards. The typical illustrations are in diagrammatic form only.

The terms ‘normative’ and ‘informative’ have been used in this Standard to define the application of the appendix to which they apply. A ‘normative’ appendix is an integral part of a Standard, whereas an ‘informative’ appendix is only for information and guidance.

The use of Notes in this Standard is of an advisory nature only. They provide explanations and guidance on recommended design considerations or technical procedures, as well as informative cross-references to other documents or publications.

This Standard incorporates a commentary on some of the clauses. The commentary directly follows the relevant clause, is designated by ‘C’ preceding the clause number, and is printed in italics in a box. The commentary is for information and guidance.
CONTENTS

FOREWORD ...................................................................................................................... 6

SECTION 1 SCOPE AND GENERAL
1.1 SCOPE ..................................................................................................................... 7
1.2 OBJECTIVE ............................................................................................................... 7
1.3 NORMATIVE REFERENCES ..................................................................................... 7
1.4 DEFINITIONS ............................................................................................................ 9

SECTION 2 WATER SUPPLIES
2.1 GENERAL ................................................................................................................. 12
2.2 ACCEPTABLE SOURCES OF SUPPLY ..................................................................... 12
2.3 QUALITY OF WATER .............................................................................................. 12
2.4 FLOODED SUCTION ............................................................................................... 12
2.5 SUCTION .................................................................................................................. 12
2.6 SUPPLY FROM NATURAL SOURCES .................................................................. 13

SECTION 3 GENERAL REQUIREMENTS FOR FIRE PROTECTION PUMPSETS
3.1 PERFORMANCE CHARACTERISTICS .................................................................. 18
3.2 PUMP TYPES ........................................................................................................... 21
3.3 TYPES OF DRIVERS ............................................................................................... 23
3.4 PUMP/DRIVER CONNECTION .............................................................................. 23
3.5 BASEPLATE ............................................................................................................. 23
3.6 PIPEWORK ............................................................................................................... 24
3.7 VALVES ................................................................................................................... 25
3.8 VISIBILITY OF DISCHARGE ................................................................................. 28
3.9 PRESSURE GAUGES ............................................................................................... 28
3.10 FLOW-MEASURING DEVICES ............................................................................ 29
3.11 STARTING AND CONTROL ................................................................................... 29
3.12 ELECTRICAL REQUIREMENTS ............................................................................ 29
3.13 MARKING ................................................................................................................ 33
3.14 PUMPSET PAINTING ............................................................................................. 35
3.15 PUMPSET MANUALS ............................................................................................. 35
3.16 PUMPSET CONFIGURATIONS ............................................................................. 35
3.17 PUMP HOUSES AND PUMP ROOMS ..................................................................... 40

SECTION 4 SPECIFIC REQUIREMENTS FOR FIRE PROTECTION PUMPS
4.1 GENERAL ................................................................................................................. 41
4.2 END-SUCTION PUMPS ........................................................................................... 43
4.3 AXIALLY SPLIT CASE PUMPS (HORIZONTAL OR VERTICAL SHAFT) ............... 43
4.4 MULTISTAGE CENTRIFUGAL PUMPS ................................................................ 44
4.5 TURBINE TYPE CENTRIFUGAL PUMPS (VERTICAL SHAFT) .......................... 44
4.6 DRIVERS FOR VERTICAL TURBINE PUMPS ...................................................... 46
4.7 POSITIVE DISPLACEMENT PUMPS FOR FIRE PROTECTION APPLICATIONS .... 47

SECTION 5 REQUIREMENTS FOR PRESSURE MAINTENANCE PUMPS
5.1 GENERAL ................................................................................................................. 49
5.2 GENERAL REQUIREMENTS FOR JOCKEY PUMPS ............................................ 49
5.3 GENERAL REQUIREMENTS FOR JACKING PUMPS ......................................... 50
SECTION 6  FIRE HOSE REEL PUMPSETS
6.1 GENERAL ................................................................................................................. 53
6.2 ELECTRIC-MOTOR DRIVEN FIRE HOSE REEL PUMPSETS ........................................ 53
6.3 COMPRESSION-IGNITION DRIVEN FIRE HOSE REEL PUMPSETS ................................. 53
6.4 TYPES ................................................................................................................................ 54
6.5 OPERATION .................................................................................................................. 54
6.6 ELECTRICAL WIRING ................................................................................................. 54
6.7 VALVES ....................................................................................................................... 54
6.8 UNIONS ....................................................................................................................... 54
6.9 MAXIMUM ALLOWABLE WORKING PRESSURE .............................................. 55
6.10 MARKING ................................................................................................................... 55

SECTION 7  RESIDENTIAL SPRINKLER PUMPSETS
7.1 GENERAL ................................................................................................................. 57
7.2 PUMPSET TYPE ....................................................................................................... 57
7.3 OPERATION ............................................................................................................. 57
7.4 ELECTRICAL ........................................................................................................... 57
7.5 VALVES ................................................................................................................... 58
7.6 UNIONS ................................................................................................................... 58
7.7 MARKING ................................................................................................................ 58

SECTION 8  ELECTRIC DRIVERS AND CONTROLLERS
8.1 ELECTRIC DRIVERS ............................................................................................... 60
8.2 ELECTRIC CONTROLLERS ................................................................................... 61

SECTION 9  COMPRESSION-IGNITION DRIVERS AND CONTROLLERS
9.1 DRIVER TYPE .......................................................................................................... 67
9.2 DRIVER PERFORMANCE ....................................................................................... 67
9.3 DRIVER SYSTEMS .................................................................................................. 68
9.4 COMPRESSION-IGNITION DRIVER CONTROLLERS ......................................... 74
9.5 ELECTRICAL CONNECTIONS ON ENGINE ......................................................... 80
9.6 SPARE PARTS .......................................................................................................... 80

SECTION 10  SHOP TESTING AND CONFORMANCE
10.1 GENERAL ................................................................................................................. 83
10.2 HYDROSTATIC TESTS ........................................................................................... 83
10.3 PERFORMANCE TESTS .......................................................................................... 83
10.4 CONFORMANCE ..................................................................................................... 85

SECTION 11  SITING AND INSTALLATION
11.1 GENERAL ................................................................................................................. 86
11.2 TEMPERATURE ....................................................................................................... 86
11.3 LOCATION ............................................................................................................... 86
11.4 LIGHTING ................................................................................................................ 86
11.5 VENTILATION ......................................................................................................... 86
11.6 DRAINAGE .............................................................................................................. 86
11.7 PLINTHS .................................................................................................................. 87
11.8 PROTECTION OF THE OVERALL SYSTEM AGAINST DAMAGE DUE TO MOVEMENT OR PRESSURE .................................................................................. 87
11.9 IDENTIFICATION OF PIPEWORK ......................................................................... 87
SECTION 12 COMMISSIONING TESTING

12.1 GENERAL ................................................................................................................. 88
12.2 ELECTRIC MOTOR PUMPSETS ............................................................................. 88
12.3 COMPRESSION-IGNITION ENGINE DRIVEN PUMPSETS ................................. 89
12.4 AUTOMATIC PRESSURE MAINTENANCE (JOCKEY) PUMPSETS ................. 91

APPENDICES

A GUIDELINES FOR THE SELECTION OF DRIVERS ............................................. 92
B OPERATIONAL WARNING SIGNS (TYPICAL) ..................................................... 94
C WIRING SYSTEMS RATING .................................................................................. 95
D THE PUMP HOUSE OR PUMP ROOM ................................................................. 97
E GUIDE TO EXHAUST SYSTEM SIZE SELECTION .......................................... 100
F TYPICAL PERFORMANCE TEST DATA SHEETS .......................................... 102
G TYPICAL PUMP START ARRANGEMENTS ....................................................... 110

BIBLIOGRAPHY .................................................................................................................. 112
