Australian Standard™

**Fire tests—Full-scale room test for
surface products**

This Australian Standard was prepared by Committee FP-018, Fire Safety. It was approved on behalf of the Council of Standards Australia on 28 March 2003 and published on 16 May 2003.

The following are represented on Committee FP-018:

Australasian Fire Authorities Council
Australian Building Codes Board
Australian Chamber of Commerce and Industry
Australian Institute of Building
Australian Wool Testing Authority
Building Research Association of New Zealand
Bureau of Steel Manufacturers of Australia
CSIRO Building Construction and Engineering
Fire Protection Association of Australia
Fire Protection Association of New Zealand
Plastics and Chemicals Industries Association
Scientific Services Laboratory—A Business Unit of AGAL
Society of Fire Protection Engineers NZ
Testing interests (Australia)

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about Standards can be found by visiting the Standards Australia web site at www.standards.com.au and looking up the relevant Standard in the on-line catalogue.

Alternatively, the printed Catalogue provides information current at 1 January each year, and the monthly magazine, *The Australian Standard*, has a full listing of revisions and amendments published each month.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Contact us via email at mail@standards.com.au, or write to the Chief Executive, Standards Australia International Ltd, GPO Box 5420, Sydney, NSW 2001.

This Standard was issued in draft form for comment as DR 03096.

Fire tests— Full-scale room test for surface products

RECONFIRMATION NOTICE

Technical Committee FP-018 has reviewed the content of this publication and in accordance with Standards Australia procedures for reconfirmation, it has been determined that the publication is still valid and does not require change.

Certain documents referenced in the publication may have been amended since the original date of publication. Users are advised to ensure that they are using the latest versions of such documents as appropriate, unless advised otherwise in this Reconfirmation Notice.

Approved for reconfirmation in accordance with Standards Australia procedures for reconfirmation on 18 November 2015.

The following are represented on Technical Committee FP-018:

Australasian Fire and Emergency Service Authorities Council
Australian Building Codes Board
Australian Industry Group
Australian Institute of Building
AWTA Textile Testing
Building Research Association of New Zealand
Bureau of Steel Manufacturers of Australia
CSIRO
Engineers Australia
Fire Protection Association Australia
Fire Protection Association New Zealand
Forest and Wood Products Australia
Insulated Panel Council Australasia
Insulation Australasia
Insurance Council of Australia
Plastics and Chemicals Industries Association
Property Council of Australia
Society of Fire Protection Engineers

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee FP-018, Fire Safety. After consultation with stakeholders in both countries, Standards Australia and Standards New Zealand decided to develop this Standard as an Australian Standard rather than an Australian/New Zealand Standard.

This Standard is identical with and has been reproduced from ISO 9705:1993, *Fire tests—Full-scale room test for surface products*.

Statements expressed in mandatory terms in notes to tables, figures or clauses are deemed to be requirements of this Standard.

As this Standard is reproduced from an international Standard, the following applies:

- (a) Its number does not appear on each page of text and its identity is shown only on the cover and title page.
- (b) In the source text ‘this International Standard’ should read ‘this Australian Standard’.
- (c) A full point substitutes for a comma when referring to a decimal marker.

CONTENTS

	Page
1 Scope	1
2 Normative reference	1
3 Definitions	1
4 Principle	2
5 Fire test room	2
6 Ignition source	3
7 Heat flux instrumentation in the fire room	4
8 Hood and exhaust duct	4
9 Instrumentation in the exhaust duct	4
10 System performance	5
11 Preparation of test specimens	6
12 Testing	7
13 Test report	7
 Annexes	
A Recommended ignition sources	9
B Alternative ignition sources	12
C Instrumentation of test room	13
D Design of exhaust system	17
E Instrumentation in exhaust duct	20
F Calculation	26
G Specimen configurations	30
H Bibliography	31

INTRODUCTION

This method is intended to describe the fire behaviour of a product under controlled laboratory conditions.

The test method may be used as part of a fire hazard assessment which takes into account all of the factors which are pertinent to an assessment of the fire hazard of a particular end use.
