

Australian Standard[®]

Automatic fire sprinkler systems

Part 4: Residential

This Australian Standard was prepared by Committee FP/4, Automatic Sprinkler Installations. It was approved on behalf of the Council of Standards Australia on 30 January 1995 and published on 5 April 1995.

The following interests are represented on Committee FP/4:

Asset Services, Department of Administrative Services
Australian Building Codes Board
Australian Chamber of Commerce and Industry
Australian Chamber of Manufactures
Australian Fire Authorities Council
Australian Fire Protection Association
Australian Water and Sewerage Authorities
Commonwealth Fire Board
CSIRO—Division of Building, Construction and Engineering
Department of Defence
Fire Protection Industry Association of Australia
Institution of Engineers, Australia
Insurance Council of Australia
Master Plumbers and Mechanical Services Association of Victoria
Melbourne Water
Telecom Australia
The Association of Consulting Engineers, Australia

Review of Australian Standards. To keep abreast of progress in industry, Australian Standards are subject to periodic review and are kept up to date by the issue of amendments or new editions as necessary. It is important therefore that Standards users ensure that they are in possession of the latest edition, and any amendments thereto.

Full details of all Australian Standards and related publications will be found in the Standards Australia Catalogue of Publications; this information is supplemented each month by the magazine 'The Australian Standard', which subscribing members receive, and which gives details of new publications, new editions and amendments, and of withdrawn Standards.

Suggestions for improvements to Australian Standards, addressed to the head office of Standards Australia, are welcomed. Notification of any inaccuracy or ambiguity found in an Australian Standard should be made without delay in order that the matter may be investigated and appropriate action taken.

This Standard was issued in draft form for comment as DR 92030.

© Copyright — STANDARDS AUSTRALIA

Users of Standards are reminded that copyright subsists in all Standards Australia publications and software. Except where the Copyright Act allows and except where provided for below no publications or software produced by Standards Australia may be reproduced, stored in a retrieval system in any form or transmitted by any means without prior permission in writing from Standards Australia. Permission may be conditional on an appropriate royalty payment. Requests for permission and information on commercial software royalties should be directed to the head office of Standards Australia.

Standards Australia will permit up to 10 percent of the technical content pages of a Standard to be copied for use exclusively in-house by purchasers of the Standard without payment of a royalty or advice to Standards Australia.

Standards Australia will also permit the inclusion of its copyright material in computer software programs for no royalty payment provided such programs are used exclusively in-house by the creators of the programs.

Care should be taken to ensure that material used is from the current edition of the Standard and that it is updated whenever the Standard is amended or revised. The number and date of the Standard should therefore be clearly identified.

The use of material in print form or in computer software programs to be used commercially, with or without payment, or in commercial contracts is subject to the payment of a royalty. This policy may be varied by Standards Australia at any time.

PREFACE

This Australian Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee on Automatic Sprinkler Installations to be Part 4 of AS 2118—*Automatic fire sprinkler systems*.

This Standard is the result of a consensus among representatives on the joint committee to produce it as an Australian Standard.

The revisions to AS 2118 include Standards Australia's requirements to keep product and installation Standards separate. When complete the series will comprise the following:

AS

- | | |
|------|--|
| 2118 | Automatic fire sprinkler systems |
| | Part 1: Standard |
| | Part 2: Drencher |
| | Part 3: Deluge |
| | Part 4: Residential |
| | Part 5: Domestic |
| | Part 6: Combined sprinkler and hydrant |
| | Part 9: Piping support and installation |
| | Part 10: Approval documentation |
| 4118 | Fire sprinkler systems |
| | Part 1.1: Components—Sprinklers and sprayers |
| | Part 1.2: Components—Alarm valves (wet) |
| | Part 1.3: Components—Water motor alarms |
| | Part 1.4: Components—Valve monitors |
| | Part 1.5: Components—Deluge and pre-action valves |
| | Part 1.6: Components—Stop valves and non-return valves |
| | Part 1.7: Components—Alarm valves (dry) |
| | Part 1.8: Components—Pressure reducing valves |
| | Part 1.9: Components—Accelerators and exhausters |
| | Part 2.1: Piping—General |

This Standard is intended to provide a degree of life safety and property protection for the inhabitants of low-rise Class 2 and Class 3 together with Class 9a, excluding hospitals, buildings as defined in the BCA. In addition to providing an increased level of protection to building occupants, the Standard has also taken into consideration the economic aspects of the sprinkler system.

The purpose of the Standard is to provide design and installation requirements for a life safety sprinkler system in addition to smoke alarms, to aid in the detection and control of fires in residential occupancies and thus provide improved protection against injury and loss of life. A sprinkler system designed and installed in accordance with this Standard is expected to prevent flashover (total involvement) in the room of fire origin, and to improve the chance for occupants to escape or be evacuated.

In preparing this Standard, the Committee considered US National Fire Protection Association (NFPA) 13R, '*Standard for the Installation of Sprinkler Systems in Residential Occupancies up to Four Stories in Height*', 1991 Edition, and the assistance gained from this source is acknowledged.

The terms 'normative' and 'informative' have been used in this Standard to define the application of the appendix to which they apply. A 'normative' appendix is an integral part of a Standard, whereas an 'informative' appendix is only for information and guidance.

STANDARDS AUSTRALIA

Australian Standard

Automatic fire sprinkler systems

Part 4: Residential

SECTION 1 SCOPE AND GENERAL

1.1 SCOPE This Standard specifies requirements for the design, installation and performance of automatic life safety fire sprinkler systems in residential buildings containing not more than four storeys.

1.2 NEW DESIGNS AND INNOVATIONS Any alternative materials, designs, methods of assembly and procedures that do not comply with specific requirements of this Standard or are not mentioned in it but give equivalent results to those specified, are not necessarily prohibited. The specified approval remains the prerogative of the regulatory authority.

1.3 REFERENCED DOCUMENTS The following documents are referred to in this Standard:

AS

1670	Automatic fire detection and alarm systems—System design, installation and commissioning
1851	Maintenance of fire protection equipment
1851.3	Part 3: Automatic fire sprinkler systems
2118	Automatic fire sprinkler systems
2118.1	Part 1: Standard
2118.9	Part 9: Piping support and installation
2484	Fire—Glossary of terms
2484.1	Part 1: Fire tests
2482.2	Part 2: Fire protection and firefighting equipment
2941	Fixed fire protection installations—Pumpset systems
3000	Electrical installations—Buildings, structures and premises
3013	Electrical installations—Wiring systems for specific applications
3500	The National Plumbing and Drainage Code
3500.0	Part 0: Glossary of terms
3500.1	Part 1: Water supply
3786	Smoke alarms
4118	Fire sprinkler systems
4118.2.1	Part 2.1: Piping
BCA	Building Code of Australia

1.4 DEFINITIONS For the purpose of this Standard, the definitions given in AS 2484.1, AS 2484.2, AS 3500.0, AS 2118.1 and those below apply.
