Masonry structures
This Australian Standard® was prepared by Committee BD-004, Masonry Structures. It was approved on behalf of the Council of Standards Australia on 8 January 2018. This Standard was published on 14 February 2018.

The following are represented on Committee BD-004:

- Australasian (Iron and Steel) Slag Association
- Australian Building Codes Board
- Australian Institute of Building Surveyors
- Building Designers Association of Australia
- Cement Concrete and Aggregates Australia
- Concrete Masonry Association of Australia
- Consult Australia
- Engineers Australia
- Galvanizers Association of Australia
- Housing Industry Association
- Master Builders Australia
- Queensland University of Technology
- Steel Reinforcement Institute of Australia
- Think Brick Australia
- University of Adelaide
- University of Newcastle

This Standard was issued in draft form for comment as DR AS 3700:2017.

Standards Australia wishes to acknowledge the participation of the expert individuals that contributed to the development of this Standard through their representation on the Committee and through the public comment period.

---

**Keeping Standards up-to-date**

Australian Standards® are living documents that reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued.

Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments that may have been published since the Standard was published.

Detailed information about Australian Standards, drafts, amendments and new projects can be found by visiting [www.standards.org.au](http://www.standards.org.au)

Standards Australia welcomes suggestions for improvements, and encourages readers to notify us immediately of any apparent inaccuracies or ambiguities. Contact us via email at [mail@standards.org.au](mailto:mail@standards.org.au), or write to Standards Australia, GPO Box 476, Sydney, NSW 2001.
PREFACE

This Standard was prepared by the Standards Australia Committee BD-004, Masonry Structures, to supersede AS 3700—2011.

The objective of this Standard is to provide minimum requirements for the design and construction of unreinforced, reinforced and prestressed masonry, including built-in components.

The principal changes from the 2011 edition of the Standard include the following:

(a) Increased capacity reduction factor for compression in hollow masonry with wide spaced reinforcement.

(b) Inclusion of provisions for stack bonded masonry.

(c) Compressive strength of grouted masonry.

(d) Compression design of reinforced masonry.

(e) Concentrated loads in reinforced masonry.

(f) Minor changes to ensure consistency with AS 4773.

(g) New Appendix I on the relationship between ISO 9223 corrosivity categories and durability class. Also includes solutions for wall ties, connectors and accessories, and lintels and shelf angles, as provided in AS/NZS 2699.1, AS/NZS 2699.2 and AS/NZS 2699.3 respectively.

(h) Changes to Table 10.3 to align with changes made to AS 1170.4.

The following are excluded:

(i) Thermal performance.

(ii) Acoustic insulation.

Statements expressed in mandatory terms in notes to tables and figures are deemed to be requirements of this Standard.

The terms ‘normative’ and ‘informative’ have been used in this Standard to define the application of the appendix to which they apply. A ‘normative’ appendix is an integral part of a Standard, whereas an ‘informative’ appendix is only for information and guidance.
# CONTENTS

## SECTION 1  SCOPE AND GENERAL
1.1 SCOPE ............................................................................................................. 6
1.2 NORMATIVE REFERENCES ........................................................................... 6
1.3 USE OF ALTERNATIVE MATERIALS OR METHODS ........................................ 8
1.4 INFORMATION TO BE PROVIDED ON DOCUMENTS ....................................... 8
1.5 DEFINITIONS ................................................................................................. 9
1.6 NOTATION ................................................................................................... 17
1.7 EXISTING STRUCTURES .............................................................................. 24

## SECTION 2 REQUIREMENTS FOR DESIGN
2.1 SCOPE OF SECTION .................................................................................... 25
2.2 AIM ............................................................................................................... 25
2.3 GENERAL REQUIREMENTS ......................................................................... 25
2.4 DESIGN REQUIREMENTS ........................................................................... 25
2.5 SERVICEABILITY, STRENGTH AND STABILITY ............................................ 26
2.6 LOADS AND LOAD COMBINATIONS .......................................................... 27
2.7 LATERAL SUPPORT .................................................................................... 28
2.8 OTHER DESIGN REQUIREMENTS ............................................................... 28

## SECTION 3 DESIGN PROPERTIES
3.1 SCOPE OF SECTION .................................................................................... 30
3.2 MASONRY UNITS ....................................................................................... 30
3.3 MASONRY ................................................................................................... 30
3.4 TIES AND ACCESSORIES .......................................................................... 34
3.5 GROUT ......................................................................................................... 34
3.6 REINFORCEMENT ....................................................................................... 34
3.7 TENDONS ................................................................................................... 35

## SECTION 4 GENERAL DESIGN ASPECTS
4.1 SCOPE OF SECTION .................................................................................... 37
4.2 MEMBERS OF MIXED CONSTRUCTION ...................................................... 37
4.3 CHASES, HOLES AND RECESSES ............................................................ 37
4.4 CAPACITY REDUCTION FACTORS ........................................................... 37
4.5 CROSS-SECTION PROPERTIES ................................................................. 38
4.6 DESIGN FOR ROBUSTNESS ..................................................................... 40
4.7 PREVENTION OF MOISTURE PENETRATION ......................................... 41
4.8 CONTROL JOINTS ...................................................................................... 42
4.9 MORTAR JOINTS ....................................................................................... 46
4.10 WALL TIES ............................................................................................... 46
4.11 BONDING, TYING AND SUPPORTING ..................................................... 47
4.12 STACK BONDED MASONRY .................................................................... 48
4.13 ARCHES AND LINTELS .......................................................................... 49
4.14 INTERACTION BETWEEN MASONRY MEMBERS AND SLABS, BEAMS OR COLUMNS ................................................................. 50
4.15 CORBELLING ........................................................................................... 50
4.16 ATTACHMENT TO FACE OF WALLS ......................................................... 51

## SECTION 5 DESIGN FOR DURABILITY
5.1 SCOPE OF SECTION .................................................................................... 52
5.2 GENERAL ................................................................................................... 52
