

Australian/New Zealand Standard™

**Specification for radio disturbance and  
immunity measuring apparatus and  
methods**

**Part 1.2: Radio disturbance and  
immunity measuring apparatus—  
Ancillary equipment—Conducted  
disturbances**

## **AS/NZS CISPR 16.1.2:2012**

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee TE-003, Electromagnetic Interference. It was approved on behalf of the Council of Standards Australia on 6 November 2012 and on behalf of the Council of Standards New Zealand on 29 October 2012.

This Standard was published on 10 December 2012.

---

The following are represented on Committee TE-003:

Australian Broadcasting Corporation  
Australian Chamber of Commerce and Industry  
Australian Communications and Media Authority  
Australian Industry Group  
Australian Information Industry Association  
Consumer Electronics Supplier Association  
Curtin University  
Department of Defence  
Electrical Compliance Testing Association  
EMC Society of Australia  
Energy Networks Association  
Engineers Australia  
Free TV Australia  
Lighting Council Australia  
Ministry of Economic Development, New Zealand  
National Measurement Institute  
SingTel Optus  
Wireless Institute Australia

---

### **Keeping Standards up-to-date**

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Web Shop at [www.saiglobal.com.au](http://www.saiglobal.com.au) or Standards New Zealand web site at [www.standards.co.nz](http://www.standards.co.nz) and looking up the relevant Standard in the on-line catalogue.

For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia or Standards New Zealand at the address shown on the back cover.

---

*This Standard was issued in draft form for comment as DR AS/NZS CISPR 16.1.2.*

## PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee TE-003, Electromagnetic Interference, to supersede AS/NZS CISPR 16.1.2:2004.

The objective of this Standard is to specify the characteristics and performance of equipment for the measurement of radio disturbance voltages and currents in the frequency range 9 kHz to 1 GHz.

This Standard is identical with, and has been reproduced from, CISPR 16-1-2, Ed. 1.2 (2006), *Specification for radio disturbance and immunity measuring apparatus and methods—Part 1-2: Radio disturbance and immunity measuring apparatus—Ancillary equipment—Conducted disturbances*.

This Ed 1.2 of CISPR 16-1-2 is the consolidated version of Ed 1.0 (2003), its Amendment 1 (2004) and its Amendment 2 (2006). The amended text is indicated by vertical lines in the margin.

As this Standard is reproduced from an International Standard, the following applies:

- (a) Its number appears on the cover and title page while the International Standard number appears only on the cover.
- (b) In the source text ‘this part of CISPR 16’ should read ‘this Australian/New Zealand Standard’.
- (c) A full point substitutes for a comma when referring to a decimal marker.

References to International Standards should be replaced by references to Australian or Australian/New Zealand Standards, as follows:

<i>Reference to International Standard</i>	<i>Australian/New Zealand Standard</i>
CISPR	AS/NZS CISPR
14 Electromagnetic compatibility— Requirements for household appliances, electric tools and similar apparatus—	14 Electromagnetic Compatibility— Requirements for household appliances, electrical tools and similar apparatus—
14-1 Part 1: Emission	14.1 Part 1: Emission
16 Specification for radio disturbance and immunity measuring apparatus and methods	16 Specification for radio disturbance and immunity measuring apparatus and methods
16-1-1 Part 1-1: Radio disturbance and immunity measuring apparatus— Measuring apparatus	16.1.1 Part 1.1: Radio disturbance and immunity measuring apparatus— Measuring apparatus
16-2-1 Part 2-1: Methods of measurement of disturbances and immunity—Conducted disturbance measurements	16.2.1 Part 2.1: Methods of measurement of disturbances and immunity—Conducted disturbance measurements
16-4-1 Part 4-1: Uncertainties, statistics and limit modelling—Uncertainties in standardized EMC tests	16.4.1 Part 4.1: Uncertainties, statistics and limit modelling—Uncertainties in standardized EMC tests
16-4-2 Part 4-2: Uncertainties, statistics and limit modelling—Measurement instrumentation uncertainty	16.4.2 Part 4.2: Uncertainties, statistics and limit modelling—Uncertainty in EMC measurements
CISPR TR	AS/NZS CISPR
16-3 Part 3: CISPR technical reports (2003)	16.3 Part 3: CISPR technical reports (2004)

The terms ‘normative’ and ‘informative’ have been used in this Standard to define the application of the appendix to which they apply. A ‘normative’ appendix is an integral part of a Standard, whereas an ‘informative’ appendix is only for information and guidance.

## CONTENTS

1	Scope .....	1
2	Normative references .....	1
3	Definitions .....	2
4	Artificial mains networks .....	3
5	Current and voltage probes .....	12
6	Coupling units for conducted current immunity measurement .....	17
7	Coupling devices for measuring signal lines .....	18
8	The artificial hand and series RC element .....	22
	Annex A (normative) Artificial mains networks (clause 4) .....	27
	Annex B (informative) Construction, frequency range, and calibration of current probes (clause 5) .....	36
	Annex C (informative) Construction of the coupling units for current injection for the frequency range 0,15 MHz to 30 MHz (clause 6) .....	45
	Annex D (informative) Principle of operation and examples of coupling units for conducted current immunity measurements (clause 6) .....	51
	Annex E (normative) Example and measurement of the parameters of the asymmetric artificial network (AAN) .....	55
	Annex F (normative) Example and measurement of the parameters of the AN for coaxial and other screened cables .....	60
	Annex G (informative) Construction and evaluation of capacitive voltage probe (subclause 5.2.2) .....	62
	Annex H (informative) Rationale for the introduction of a minimum decoupling factor between mains and EUT/receiver ports for the V-AMN .....	69
	Annex I (informative) Rationale for the introduction of a phase tolerance for the V-AMN input impedance .....	70
