

Australian/New Zealand Standard™

**Geographic information—Spatial
referencing by coordinates**

AS/NZS ISO 19111:2004

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee IT-004, Geographical Information. It was approved on behalf of the Council of Standards Australia on 14 May 2004 and on behalf of the Council of Standards New Zealand on 11 June 2004.
It was published on 8 July 2004.

The following are represented on Committee IT-004:

ACT Department of Urban Services
ANZLIC – the Spatial Information Council
Association of Aerial Surveyors Australia
Association of Crown Research Institutes New Zealand
Australasian Fire Authorities Council
Australasian Urban and Regional Information Systems Association
Australian Bureau of Statistics
Australian Map Circle
Department for Administrative and Information Services (South Australia)
Department of Conservation, NZ
Department of Defence (Australia)
Department of Infrastructure, Planning and Environment (NT)
Department of Natural Resources and Mines (Qld)
Department of Primary Industries, Water and Environment Tasmania
Energy Supply Association of Australia
Geoscience Australia
Institution of Surveyors Australia
Inter-Governmental Committee on Surveying and Mapping
Land Information New Zealand
Land Victoria
Land and Property Information NSW
Local Government New Zealand
Mapping Sciences Institute, Australia
Telecom New Zealand
Western Australian Land Information Systems

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Web Shop at www.standards.com.au or Standards New Zealand web site at www.standards.co.nz and looking up the relevant Standard in the on-line catalogue.

Alternatively, both organizations publish an annual printed Catalogue with full details of all current Standards. For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia International or Standards New Zealand at the address shown on the back cover.

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee IT-004, Geographical Information.

This Standard is identical with, and has been reproduced from ISO 19111:2003, *Geographic information—Spatial referencing by coordinates*.

The objective of this Standard is to define the conceptual schema for the description of spatial referencing by coordinates. It describes the minimum data required to define one-, two-, and three-dimensional coordinate reference systems. It allows additional descriptive information to be provided. It also describes the information required to change coordinate values from one coordinate reference system to another.

The terms ‘normative’ and ‘informative’ are used to define the application of the annex to which they apply. A normative annex is an integral part of a standard, whereas an informative annex is only for information and guidance.

As this Standard is reproduced from an international standard, the following applies:

- (a) Its number appears on the cover and title page while the international standard number appears only on the cover
- (b) In the source text ‘this International Standard’ should read ‘this Australian/New Zealand Standard’.
- (c) A full point substitutes for a comma when referring to a decimal marker.

References to International Standards should be replaced by references to Australian or Australian/New Zealand Standards, as follows:

<i>Reference to International Standard</i>		<i>Australian/New Zealand Standard</i>	
ISO		AS/NZS	
19113	Geographic information—Quality principles	19113	Geographic information—Quality principles
		AS ISO	
1000	SI units and recommendations for use of their multiples and of certain other units	1000	The international system of units (SI) and its application

CONTENTS

Page

Introduction	iv
1 Scope	1
2 Conformance requirements	1
3 Normative references	1
4 Terms and definitions	1
5 Conventions	5
5.1 Symbols and abbreviated terms	5
5.2 UML notation	6
6 Definition of the conceptual schema for coordinate reference systems	7
6.1 Introduction	7
6.2 Coordinate reference system	7
6.2.1 Type of coordinate reference system	7
6.2.2 Single coordinate reference system	8
6.2.3 Compound coordinate reference system	8
6.3 Datum	9
6.3.1 Types of datums	9
6.3.2 Datum description	10
6.3.3 Prime meridian	10
6.3.4 Ellipsoid	11
6.4 Coordinate system	11
6.5 Coordinate operation — coordinate conversion and coordinate transformation	12
6.5.1 General	12
6.5.2 Coordinate conversion (including map projection)	13
6.5.3 Coordinate transformation	14
6.5.4 Requirements for describing a coordinate operation	14
6.5.5 Concatenated coordinate operation	16
6.6 Citations	17
6.7 Accuracy and precision of coordinates, coordinate operations, and parameters	18
6.8 Attributes to describe a coordinate reference system	19
Annex A (normative) Conformance	22
Annex B (normative) UML schemas	24
Annex C (informative) Decision trees	27
Annex D (informative) Geodetic relationships	29
Annex E (informative) Examples	35
