

Australian/New Zealand Standard™

**Specification for radio disturbance and
immunity measuring apparatus and
methods**

**Part 4.5: Uncertainties, statistics and
limit modelling—Conditions for the use
of alternative test methods**

AS/NZS CISPR 16.4.5:2013

This Joint Australian/New Zealand Standard was prepared by Joint Technical Committee TE-003, Electromagnetic Interference. It was approved on behalf of the Council of Standards Australia on 31 May 2013 and on behalf of the Council of Standards New Zealand on 23 April 2013.
This Standard was published on 20 June 2013.

The following are represented on Committee TE-003:

Australian Broadcasting Corporation
Australian Communications and Media Authority
Australian Industry Group
Australian Information Industry Association
Consumer Electronics Suppliers Association
Consumers Federation of Australia
Curtin University of Technology
Department of Defence, Australia
Electrical Compliance Testing Association
Energy Networks Association
Engineers Australia
Lighting Council New Zealand
Lighting Council of Australia
Ministry of Economic Development, New Zealand
National Measurement Institute
Wireless Institute Australia

Keeping Standards up-to-date

Standards are living documents which reflect progress in science, technology and systems. To maintain their currency, all Standards are periodically reviewed, and new editions are published. Between editions, amendments may be issued. Standards may also be withdrawn. It is important that readers assure themselves they are using a current Standard, which should include any amendments which may have been published since the Standard was purchased.

Detailed information about joint Australian/New Zealand Standards can be found by visiting the Standards Web Shop at www.saiglobal.com.au or Standards New Zealand web site at www.standards.co.nz and looking up the relevant Standard in the on-line catalogue.

For more frequent listings or notification of revisions, amendments and withdrawals, Standards Australia and Standards New Zealand offer a number of update options. For information about these services, users should contact their respective national Standards organization.

We also welcome suggestions for improvement in our Standards, and especially encourage readers to notify us immediately of any apparent inaccuracies or ambiguities. Please address your comments to the Chief Executive of either Standards Australia or Standards New Zealand at the address shown on the back cover.

This Standard was issued in draft form for comment as DR AS/NZS CISPR 16.4.5.

Australian/New Zealand Standard™

Specification for radio disturbance and immunity measuring apparatus and methods

Part 4.5: Uncertainties, statistics and limit modelling—Conditions for the use of alternative test methods

PREFACE

This Standard was prepared by the Joint Standards Australia/Standards New Zealand Committee TE-003, Electromagnetic Interference.

The objective of this Standard is to specify a method to enable product committees to develop limits for alternative test methods, using conversions from established limits.

This Standard is identical with, and has been reproduced from CISPR/TR 16-4-5, Ed. 1.0 (2006), *Specification for radio disturbance and immunity measuring apparatus and methods—Part 4-5: Uncertainties, statistics and limit modelling—Conditions for the use of alternative test methods*.

As this Standard is reproduced from an International Standard, the following applies:

- (a) In the source text ‘this part of CISPR 16-4’ should read ‘this Australian/New Zealand Standard’.
- (b) A full point substitutes for a comma when referring to a decimal marker.

References to International Standards should be replaced by references to Australian or Australian/New Zealand Standards, as follows:

<i>Reference to International Standard</i>	<i>Australian/New Zealand Standard</i>
CISPR	AS/NZS CISPR
16	16
Specification for radio disturbance and immunity measuring apparatus and methods	Specification for radio disturbance and immunity measuring apparatus and methods
16-4-1 (2003)	16.4.1 (2004)
Part 4-1: Uncertainties, statistics and limit modelling—Uncertainties in standardized EMC tests	Part 4.1: Uncertainties, statistics and limit modelling—Uncertainties in standardized EMC tests
16-4-2 (2003)	16.4.2 (2004)
Part 4-2: Uncertainties, statistics and limit modelling—Uncertainty in EMC measurements	Part 4.2: Uncertainties, statistics and limit modelling—Uncertainty in EMC measurements

Only international references that have been adopted as Australian or Australian/New Zealand Standards have been listed.

The term ‘informative’ has been used in this Standard to define the application of the annex to which it applies. An ‘informative’ annex is only for information and guidance.

CONTENTS

1	Scope.....	6
2	Normative references	6
3	Terms and definitions	6
4	Symbols and abbreviated terms.....	7
5	Introduction	8
6	Procedure to derive limits for an alternative test method.....	9
6.1	Overview	9
6.2	Select the reference quantity <i>X</i>	12
6.3	Describe the test methods and measurands	12
6.4	Determine the deviations of the measured quantities from the reference quantity	13
6.5	Determine the average values of the deviations	13
6.6	Estimate the standard uncertainties of the test methods	14
6.7	Estimate the expanded uncertainties of the test methods	15
6.8	Calculate the average conversion factor	16
6.9	Verify the calculated values.....	17
6.10	Apply the conversion	17
	Annex A (informative) Remarks on EUT modelling.....	18
	Annex B (informative) Examples of application of the test method comparison procedure	19
	Bibliography.....	49
	Figure 1 – Overview of quantities to estimate for use in conversion procedure.....	10
	Figure 2 – Overview of limit conversion procedure using estimated quantities.....	11
	Figure B.1 – Example reference quantity	19
	Figure B.2 – EUT and antenna set-up for fully anechoic room emission measurement	20
	Figure B.3 – EUT and antenna set-up for open-area test site measurement.....	20
	Figure B.4 – Radiation characteristics of elementary radiator (left), and scheme of EUT-model (right)	21
	Figure B.5 – Maximum average deviations for 3 m FAR (top) and 10 m OATS (bottom)	24
	Figure B.6 – Sample cumulative distribution function	26
	Figure B.7 – Uncertainties due to the unknown EUT characteristic for 3 m FAR (top) and 10 m OATS (bottom)	28
	Figure B.8 – Expanded uncertainties ($k = 2$) of alternative (3 m FAR, top) and established (10 m OATS, bottom) test methods	32
	Figure B.9 – Maximum average conversion factors for different volumes	33
	Figure B.10 – Photo (left) and cut-view of simulation model (right) of the specimen EUT	35
	Figure B.11 – Deviations of the specimen EUT: 3 m fully anechoic room (top) and 10 m open area test site (bottom).....	36
	Figure B.12 – Sample FAR measurement	37
	Figure B.13 – OATS 10 m limit line converted to FAR 3 m conditions.....	37
