IRISH STANDARD

I.S. EN 50444:2008

BASIC STANDARD FOR THE EVALUATION
OF HUMAN EXPOSURE TO
ELECTROMAGNETIC FIELDS FROM
EQUIPMENT FOR ARC WELDING AND
ALLIED PROCESSES

© NSAI 2008

Price Code O
This page is intentionally left BLANK.
Basic standard for the evaluation of human exposure to electromagnetic fields from equipment for arc welding and allied processes

Norme de base pour l'évaluation de l'exposition des personnes aux champs électromagnétiques d'un équipement pour le soudage à l'arc et les techniques connexes

Grundnorm zur Ermittlung der Exposition von Personen gegenüber elektromagnetischen Feldern von Einrichtungen zum Lichtbogenschweißen und artverwandten Prozessen

This European Standard was approved by CENELEC on 2008-02-01. CENELEC members are bound to comply with the CEN/CENELEC Internal Regulations which stipulate the conditions for giving this European Standard the status of a national standard without any alteration.

Up-to-date lists and bibliographical references concerning such national standards may be obtained on application to the Central Secretariat or to any CENELEC member.

This European Standard exists in three official versions (English, French, German). A version in any other language made by translation under the responsibility of a CENELEC member into its own language and notified to the Central Secretariat has the same status as the official versions.

CENELEC members are the national electrotechnical committees of Austria, Belgium, Bulgaria, Cyprus, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Italy, Latvia, Lithuania, Luxembourg, Malta, the Netherlands, Norway, Poland, Portugal, Romania, Slovakia, Slovenia, Spain, Sweden, Switzerland and the United Kingdom.

Foreword

This European Standard was prepared by the Technical Committee CENELEC TC 26A, Electric arc welding equipment.

The text of the draft was submitted to the formal vote and was approved by CENELEC as EN 50444 on 2008-02-01.

The following dates were fixed:

- latest date by which the EN has to be implemented at national level by publication of an identical national standard or by endorsement (dop) 2009-02-01
- latest date by which the national standards conflicting with the EN have to be withdrawn (dow) 2011-02-01

This European Standard is to be read in conjunction with EN 50445.

This European Standard has been prepared under mandates M/305 and M/351 given to CENELEC by the European Commission and the European Free Trade Association.
# Contents

1 Scope ...............................................................................................................................................6

2 Normative references .....................................................................................................................6

3 Terms and definitions ....................................................................................................................6

3.1 General ...................................................................................................................................6

3.2 Specific for arc welding and similar applications .................................................................8

4 Physical quantities, units and constants .....................................................................................9

4.1 Quantities and units................................................................................................................9

4.2 Constants................................................................................................................................9

5 Assessment procedures ................................................................................................................9

5.1 Arc welding equipment components to be tested .................................................................9

5.2 Assessment conditions...........................................................................................................9

5.3 Averaging................................................................................................................................9

5.4 Pulsed or non-sinusoidal welding current...............................................................................9

5.4.1 General .................................................................................................................................9

5.4.2 Summation for basic restriction assessment .................................................................10

5.4.2.1 Summation of current density components without phase information ...10

5.4.2.2 Summation of current density components including phase information ........10

5.4.2.3 Summation of specific absorption rate (SAR) components .....................11

5.4.3 Summation for reference level assessment ....................................................................11

5.4.3.1 Summation for stimulation effects without phase information ..................11

5.4.3.2 Effective reference level method..............................................................12

5.4.3.3 Summation for stimulation effects including phase information ...........13

5.4.3.4 Summation for thermal effects .................................................................13

5.4.4 Equivalent frequency of induced current density waveforms ..................................13

5.5 Conductivity of living tissue ..................................................................................................14

5.6 Frequency range limitations .................................................................................................14

5.7 Application of assessment procedures .................................................................................15

5.8 Measurements......................................................................................................................16

5.8.1 Measuring equipment ..............................................................................................16

5.8.2 Static field measurements .......................................................................................17

5.8.3 Time domain field measurements ...........................................................................17

5.8.4 Broadband field measurements ............................................................................17

5.8.5 Frequency selective field measurements ....................................................................17

5.8.6 Time domain weighted field measurements ............................................................18

5.9 Analytical calculations ..........................................................................................................18

5.9.1 General information ........................................................................................................18

5.9.2 Derivation of magnetic field based on welding current............................................18

5.9.3 Derivation of induced current density based on magnetic field .........................19
5.10 Numerical calculations..........................................................................................................20
  5.10.1 General information ...................................................................................................20
  5.10.2 Derivation of magnetic field ....................................................................................20
  5.10.3 Derivation of current density using conductive disc models .....................................20
  5.10.4 Simulations based on anatomical body models ......................................................21
    5.10.4.1 General information ..................................................................................21
    5.10.4.2 Anatomical body models ..........................................................................21
    5.10.4.3 Calculation methods .................................................................................22
    5.10.4.4 Position of the body model in relation to the welding cables ...................22

6 Uncertainty of assessment..........................................................................................................22
  6.1 Including uncertainty .............................................................................................................22
    6.1.1 General information .................................................................................................22
    6.1.2 Shared uncertainty budget ......................................................................................22
    6.1.3 Using uncertainty in comparison against limit values ..............................................23
  6.2 Evaluation of uncertainties ...................................................................................................23
    6.2.1 Introduction ..............................................................................................................23
    6.2.2 Individual uncertainties ............................................................................................23
    6.2.3 Combined uncertainties ...........................................................................................23
  6.3 Reasonable overall uncertainties .........................................................................................23
  6.4 Examples of typical uncertainties .........................................................................................24

7 Assessment report .......................................................................................................................25
  7.1 General principles .................................................................................................................25
  7.2 Items to be recorded in the assessment report ...................................................................25

Annex A (normative) Assessment parameters ....................................................................................26
Annex B (informative) Examples for exposure assessment .................................................................30
Annex C (informative) Numerical simulation using anatomical body models ....................................39
Annex D (informative) Geometry factor and field gradients ...............................................................43
Annex E (informative) Welding current ripple assessment ...............................................................44
Annex F (informative) Summation using first order filter weighting functions ...............................46
Annex G (informative) Example for an uncertainty budget ..............................................................50
