## Wind turbine generator systems –

### Part 21: Measurement and assessment of power quality characteristics of grid connected wind turbines

*This **English-language** version is derived from the original **bilingual** publication by leaving out all French-language pages. Missing page numbers correspond to the French-language pages.*

Reference number  
IEC 61400-21:2001(E)

## Publication numbering

As from 1 January 1997 all IEC publications are issued with a designation in the 60000 series. For example, IEC 34-1 is now referred to as IEC 60034-1.

## Consolidated editions

The IEC is now publishing consolidated versions of its publications. For example, edition numbers 1.0, 1.1 and 1.2 refer, respectively, to the base publication, the base publication incorporating amendment 1 and the base publication incorporating amendments 1 and 2.

## Further information on IEC publications

The technical content of IEC publications is kept under constant review by the IEC, thus ensuring that the content reflects current technology. Information relating to this publication, including its validity, is available in the IEC Catalogue of publications (see below) in addition to new editions, amendments and corrigenda. Information on the subjects under consideration and work in progress undertaken by the technical committee which has prepared this publication, as well as the list of publications issued, is also available from the following:

- **IEC Web Site** ([www.iec.ch](http://www.iec.ch))

- **Catalogue of IEC publications**

The on-line catalogue on the IEC web site ([www.iec.ch/searchpub](http://www.iec.ch/searchpub)) enables you to search by a variety of criteria including text searches, technical committees and date of publication. On-line information is also available on recently issued publications, withdrawn and replaced publications, as well as corrigenda.

- **IEC Just Published**

This summary of recently issued publications ([www.iec.ch/online\\_news/justpub](http://www.iec.ch/online_news/justpub)) is also available by email. Please contact the Customer Service Centre (see below) for further information.

## CONTENTS

FOREWORD.....	7
INTRODUCTION.....	9
1 Scope.....	11
2 Normative references.....	13
3 Definitions.....	13
4 Symbols and units.....	21
5 Abbreviations.....	23
6 Wind turbine power quality characteristic parameters.....	25
6.1 General.....	25
6.2 Rated data.....	25
6.3 Maximum permitted power.....	25
6.4 Maximum measured power.....	25
6.5 Reactive power.....	25
6.6 Voltage fluctuations.....	25
6.7 Harmonics.....	27
7 Measurement procedures.....	29
7.1 General.....	29
7.2 Rated data.....	35
7.3 Maximum permitted power.....	35
7.4 Maximum measured power.....	35
7.5 Reactive power.....	35
7.6 Voltage fluctuations.....	37
7.7 Harmonics.....	47
8 Assessment of power quality.....	49
8.1 General.....	49
8.2 Steady-state voltage.....	51
8.3 Voltage fluctuations.....	51
8.4 Harmonics.....	57
Annex A (informative) Sample report format.....	59
Annex B (informative) Voltage fluctuations and flicker.....	69
Bibliography.....	85
Figure 1 – Assumed elements of measurement system.....	33
Figure 2 – Fictitious grid for simulation of fictitious voltage.....	37
Figure B.1 – Measurement and assessment procedures for flicker during continuous operation of the wind turbine.....	69
Figure B.2 – Measurement and assessment procedures for voltage changes and flicker during switching operations of the wind turbine.....	71
Figure B.3 – Flicker coefficient as a function of wind speed.....	73

Table 1 – Specification of requirements for measurement equipment..... 33

Table 2 – Specification of exponents according to IEC 61000-3-6 ..... 57

Table B.1 – Number of measurements  $N_{m,i}$  and frequency of occurrence of  $f_{m,i}$  and  $f_{y,i}$  for each wind speed bin in the range from cut-in wind speed to 15 m/s ..... 75

Table B.2 – Weighting factor  $w_i$  for each wind speed bin ..... 75

Table B.3 – Total sum of weighting factor multiplied by number of measurements for all wind speed bins ..... 77

Table B.4 – Weighted accumulated distribution of the flicker coefficients  $Pr(c < x)$  for each wind speed distribution ..... 77

Table B.5 – Resulting flicker coefficient in continuous operation ..... 79

Table B.6 – Probabilities and percentiles for different wind speeds ..... 79

## INTERNATIONAL ELECTROTECHNICAL COMMISSION

## WIND TURBINE GENERATOR SYSTEMS –

**Part 21: Measurement and assessment of power quality characteristics  
of grid connected wind turbines**

## FOREWORD

- 1) The IEC (International Electrotechnical Commission) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of the IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, the IEC publishes International Standards. Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. The IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
- 2) The formal decisions or agreements of the IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested National Committees.
- 3) The documents produced have the form of recommendations for international use and are published in the form of standards, technical specifications, technical reports or guides and they are accepted by the National Committees in that sense.
- 4) In order to promote international unification, IEC National Committees undertake to apply IEC International Standards transparently to the maximum extent possible in their national and regional standards. Any divergence between the IEC Standard and the corresponding national or regional standard shall be clearly indicated in the latter.
- 5) The IEC provides no marking procedure to indicate its approval and cannot be rendered responsible for any equipment declared to be in conformity with one of its standards.
- 6) Attention is drawn to the possibility that some of the elements of this International Standard may be the subject of patent rights. The IEC shall not be held responsible for identifying any or all such patent rights.

International Standard IEC 61400-21 has been prepared by IEC technical committee 88: Wind turbine systems.

The text of this standard is based on the following documents:

FDIS	Report on voting
88/144/FDIS	88/150/RVD

Full information on the voting for the approval of this standard can be found in the report on voting indicated in the above table.

This publication has been drafted in accordance with the ISO/IEC Directives, Part 3.

Annexes A and B are for information only.

The committee has decided that the contents of this publication will remain unchanged until 2005. At this date, the publication will be

- reconfirmed;
- withdrawn;
- replaced by a revised edition, or
- amended.
